candidate_panel: GO_BP
Background: measurable PXD043901 human proteome; n = 473
autocrine signaling
sequestering of metal ion
regulation of DNA-binding transcription factor activity
leukocyte homeostasis
positive regulation of intrinsic apoptotic signaling pathway
lymphocyte homeostasis
respiratory burst involved in inflammatory response
astrocyte development
gas transport
regulation of vesicle fusion
positive regulation of interleukin-2 production
leukocyte aggregation
cardiac muscle cell action potential involved in contraction
negative regulation of leukocyte differentiation
negative regulation of hemopoiesis
glial cell development
chronic inflammatory response
respiratory burst involved in defense response
membrane protein ectodomain proteolysis
one-carbon metabolic process
