nonlinked_candidate: GO_BP
Background: measurable PXD043901 human proteome; n = 473
autocrine signaling
sequestering of metal ion
leukocyte homeostasis
positive regulation of intrinsic apoptotic signaling pathway
positive regulation of NF-kappaB transcription factor activity
granulocyte migration
positive regulation of DNA-binding transcription factor activity
neutrophil migration
regulation of DNA-binding transcription factor activity
cell chemotaxis
granulocyte chemotaxis
chemotaxis
taxis
glial cell development
leukocyte chemotaxis
intrinsic apoptotic signaling pathway
lymphocyte homeostasis
respiratory burst involved in inflammatory response
astrocyte development
gas transport
